

2024 EDITION

*We build the pool...
You create the lifestyle.™*

**COMPOSITE
POOLS USA**

One-piece Fiberglass Pool Manufacturer

MADE IN USA

Create your own Backyard Oasis

ENERGY EFFICIENT AND LOW MAINTENANCE

The fiberglass used to manufacture our pools inherently acts as a natural insulator. With less fluctuation in temperature, your filter and heater work less than they would with other types of pools.

The smooth surface of our pools naturally resists the attaching of algae which reduces the amount of chemical treatment needed for healthy water conditions.

Fiberglass pools require no re-plastering, changing vinyl liners or acid washing. Maintenance is minimal.

MODULAR OPTIONS = FLEXIBILITY

Choose from over 50 designs and shapes
OR combine more than one to customize
your own backyard oasis.

MAKE IT A COMBO!

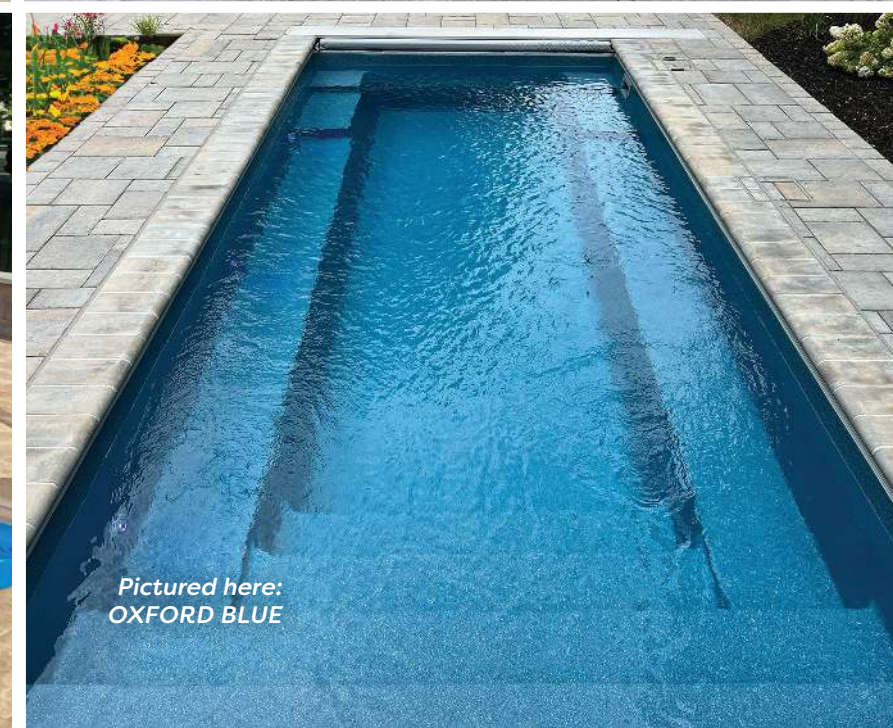

Ask us how to make any compatible model
into a pool spa combo.

A new standard in composite pool manufacturing

Detail of our proprietary layering technology*

- 1) Hydra Stone® is not your typical gel coat. Our solid surface gives you the best finish in the industry for a fiberglass pool. Two applications of 18 mils of coating (total of 36 mils) to ensure maintenance-free and lasting beauty.
- 2) 100 % Vinyl Ester Resin combined with gun woving creating the best barrier coat in the industry. This layer helps protect your pool from blistering and corrosion.
- 3) 4108/41 ounces of material - Our pools are made out of technologically advanced intricately woven glass fabric, some of the best materials used in the industry. It performs multiple tasks such as providing a good surface finish, impact and abrasion resistance, and structural integrity.
- 4) Chopped Strand Matt (CSM) - Consists of glass fibers laid randomly across each other and held together by polyester resin. This brings strength and thickness to our unique fiberglass pools.
- 5) 4108/41 ounces of material - An extra layer for maximum corrosion resistance; also heat resistant and blended for toughness.
- 6) Chop Strand Glass - We have another layer of Strand glass. Our pools are made with more reinforcement than those made by any other company.
- 7) Kevlar - Added to enhance the structural strength of the fiberglass shell. Kevlar is a strong heat resistant synthetic fiber and is five times stronger than steel.

* Illustration represents our typical pool manufacturing process. Fiberglass layering, materials and structural features are designed specifically to each particular pool model, its shape, size, and areas requiring greater or less reinforced structural integrity. For more information on our process, please contact the factory.

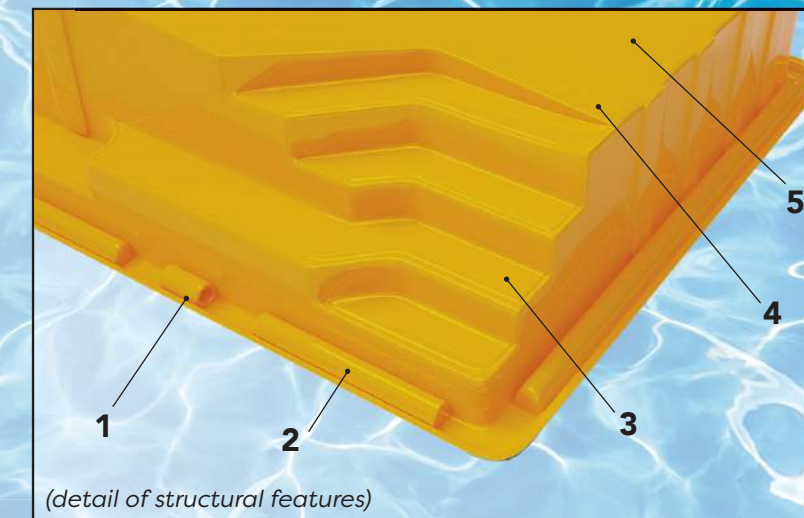

Unique unibody design provides superior durability

- 1) Lifting and tie down placements installed.
- 2) Enclosed or reinforced coping gives it a unique unibody design.
- 3) Additional layers are added strategically on steps, walls and radius parts of the pool.
- 4) Honeycombed material for superior support and strengthening on walls, steps and coping.
- 5) Exterior proprietary sealer utilized to seal every pool from exterior moisture and ground water.

All CompositepoolsUSA fiberglass pools are manufactured in a controlled factory environment using only the finest available materials. Every pool must pass a stringent quality control inspection prior to being shipped.

(detail of structural features)

Our goal is to make a pool that suits your family's budget & lifestyle
Totally Customizable Packages

DIY - AS EASY AS 1-2-3 Buy directly from the factory and save thousands!

The DIY Package

WE DELIVER THE POOL - YOU DO THE REST*

INCLUDES:

- Pool Shell
- Pump
- Filter
- Frog mineral system
- Lights

*All Pools include 1 skimmer.
 Return fittings and main drains are optional unless specified.*

Custom and brand equipment packages available

*** ASSISTANCE IS REQUIRED FOR FIRST TIME INSTALLERS:**
 FOR YOUR WARRANTY TO BE VALID, AN EXPERIENCED PROFESSIONAL POOL INSTALLER IS REQUIRED TO HELP GUIDE YOU THROUGH INSTALLATION PROCESS.

NOTE: For warranty to be valid, all non-professional installers are required to have assistance of a professional installer on-site. All DIY purchases require one-day onsite assistant for fee defined in your contract. Our professional pool installation technician will supervise setting of the pool shell into your prepared hole, and the cutting of necessary fittings.

REQUIREMENTS FOR WARRANTY:

Bond beam to lock the pool in within 10 days of installation is required. DIY and Non-Dealer installations require photos of the entire installation process. For warranty to be valid you must provide photos of the following: 1.) Excavation; 2.) Shell drop; 3.) Hole base; 4.) Backfill; 5.) Plumbing; 6.) Prior to decking with rebar and wire if used bonded; 7.) Bond beam and/or decking installed

We are the only East Coast manufacturer that sells factory-direct through our independent dealer network and distribution yards. Contact us direct or visit your local dealer.

Turnkey Package

WE INSTALL YOUR POOL,
 ELECTRICAL AND CONCRETE

INCLUDES:

- Pool Shell
- Pump Filter
- Frog Mineral system
- Lights
- Installation
- Electric up to 50'
- 3' wide cantilever
- concrete

*All Pools include 1 skimmer.
 Return fittings and main drains are optional unless specified.*

Custom back yard packages available upon request

Additional Electric requirements that exceed 50 feet will be at additional cost based on footage.

Additional Concrete exceeding 3 foot wide cantilever will be at additional cost based on square footage.

Stamped, colored or exposed aggregate concrete or pavers available at additional cost.

Pump and filter upgrades priced per your selection.

Salt chlorinator option priced per your selection.

Dig-Drop-Set Package

WE INSTALL YOUR POOL
 YOU DO THE ELECTRICAL & FINISHING

INCLUDES:

- Pool Shell
- Pump
- Filter
- Frog mineral system
- Lights
- Installation

*All Pools include 1 skimmer.
 Return fittings and main drains are optional unless specified.*

- Electric done by others
- Concrete done by others

REQUIREMENTS FOR WARRANTY:

Bond beam to lock the pool in within 10 days of installation is required. DIY and Non-Dealer installations require photos of bond beam installed or concrete decking.

LAYOUT & EXCAVATION: The pool layout is carefully marked on the ground for precision. The hole is dug to exacting specifications to achieve the proper shape and depth. Any drainage materials are laid and the ground is leveled and compacted for optimum support.

DELIVERY & PLACEMENT: The pool is brought in, set in place and leveled. Then the precision process of filling the pool with water while backfilling for support begins. All plumbing and electrical wiring are completed, pool pump(s) and filtration systems are installed. Each system is checked for operation and quality.

SETTING & FINISHING: Depending on the coping and deck materials chosen, poured concrete, pavers, travertine, or bricks are added to complete the installation. The pool and surrounding areas are cleaned and your beautiful new pool is complete!

Fiberglass pools from CompositePoolsUSA stand out among other pools. The entire process of installation, from initial layout in your back yard to swimming in your new pool, takes only a few weeks. (Concrete and vinyl liner pools can take up to several months!) With our pools, there is less mess in your backyard with a shorter wait time to enjoy your new pool.

Best practices that are essential for safe pool operation:

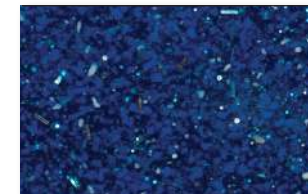

- Ensure that the pool is kept in good repair and is not used when there is a missing or broken component.
- Anyone under the influence of alcohol, drugs or stimulants that would impair their abilities or judgment should not use the pool.
- Ensure that the pool is protected by appropriate barriers to unsupervised entry, including fencing with self-latching gates, covers, alarms, etc.

There are a number of items that are essential for pool safety, all of which should be installed in accordance with the manufacturer's instructions as well as state and local statutes:

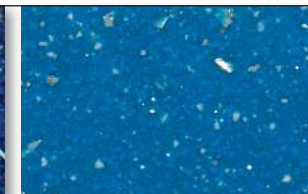

- Safety ropes should remain in place at all times.
- "No Diving" signs should be placed appropriately and in accordance with directions.
- Composite Pools USA provides an area sign which must be permanently and conspicuously affixed in the pool area.
- You must have means of entry into and exit from the pool.
- You must have fencing with a self-latching gate that prevents children and pets from reaching the pool unsupervised, in accordance with local regulations.
- You must have approved drain covers to protect against suction entrapment.
- You must have the minimum required inlets and returns to ensure proper water circulation.
- Appropriate in-pool lighting should be used at night.
- Diving boards and slides require minimum depths and distances and must be installed in strict compliance with the manufacturer's specifications. If your pool is labeled "Non-diving," do not install diving equipment.

NOTICE: The specifications in this brochure were believed to be true at the time of printing. However, specifications, standard equipment and options are subject to change without notice. Lengths, widths and depths may vary up to 3%. Measurements are to the widest point on each side of the outside edge. Diving is prohibited on pools less than 8'. Composite Pools USA does not recommend diving or the use of a diving board on any pool model. In some pictures, the safety line rope and floats, and safety signage have been removed from the pool for photographic purposes. The safety line should be permanently attached at all times. We also urge you to use handrails and grab rails in accordance with the PHTA standards.

Fire Bowls, Spa Spill over,
Cascades with raised
rectangle South Dakota spa

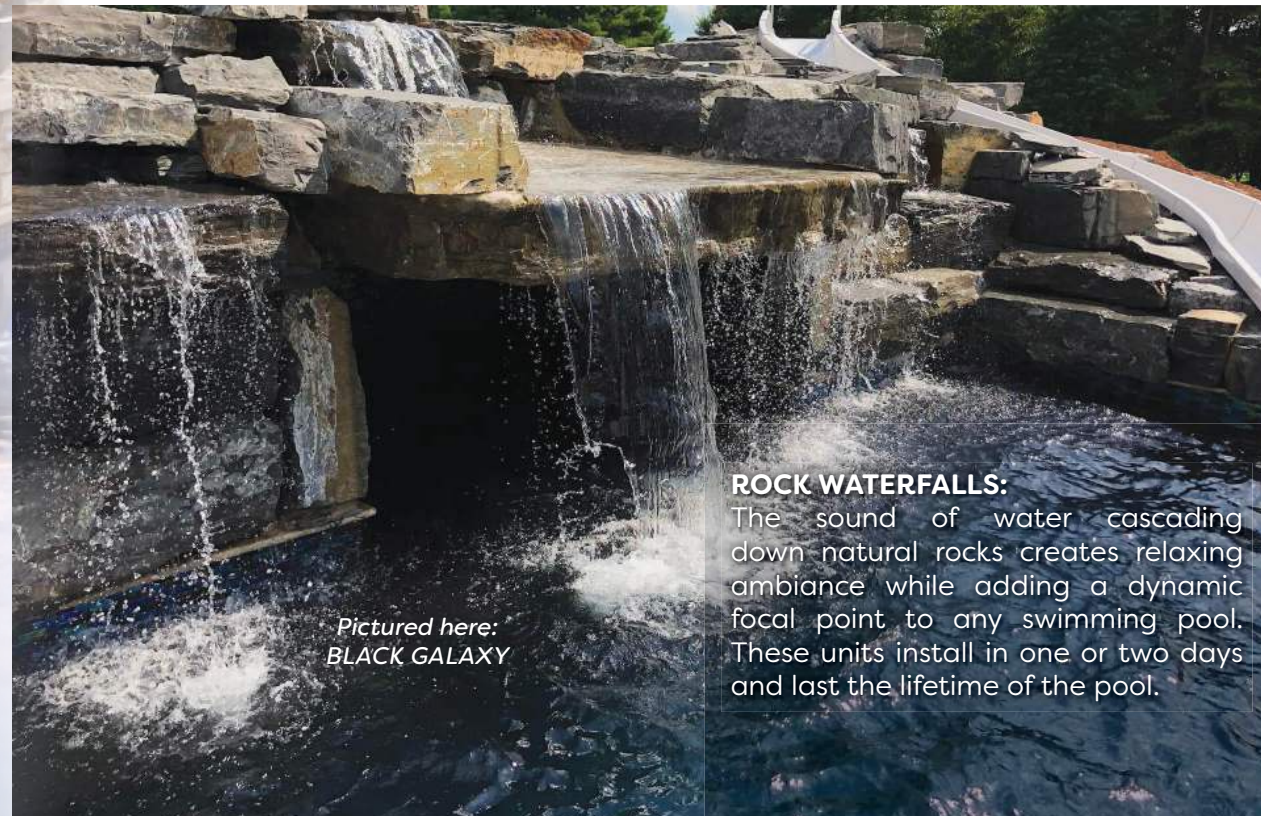

DECK JETS:

Deck jets form shimmering arcs of water from a deck or patio into a pool or spa. Deck jets can be installed in almost any combination and are adjustable up to 360°. Their dazzling effects can be easily changed to suit any mood or occasion.

SHEER DESCENTS:

These unique water features create an impressive visual effect as water flows smoothly and evenly over a sheer vertical surface; the resulting sound is peaceful and relaxing. Visually striking, sheer descents add a sense of tranquility and modern beauty.

Pictured here:
BLACK GALAXY

ROCK WATERFALLS:

The sound of water cascading down natural rocks creates relaxing ambiance while adding a dynamic focal point to any swimming pool. These units install in one or two days and last the lifetime of the pool.

SWIM SYSTEMS:

Aquatic exercise is one of the most beneficial forms of physical activity for individuals of any fitness level. Gentle and soothing, with little or no stress on joints or bones, swimming has historically been a favored method for staying in shape. Aquatherapy is ideal for individuals who suffer from arthritis, sports injuries, chronic illness, or obesity.

SAFETY COVERS

Winter pool safety covers provide an essential protective barrier that prevents debris from entering the pool. They're essential in preventing accidental falls into the pool, especially for households with children or pets.

Typically made from durable materials such as mesh or solid vinyl, they can withstand harsh weather conditions year after year. They also help to maintain the cleanliness and chemical balance of the pool water. By minimizing the risk of algae growth, they reduce the need for extensive seasonal cleaning.

AUTOMATIC COVERS

An automatic swimming pool cover provides one touch convenience eliminating the need for manually covering and uncovering your pool. Their strength and durability can support the weight of a person or pet, preventing accidental falls into the pool.

Covering the pool when not in use helps to retain heat and reduce evaporation, lowering the cost of heating and water replacement.

CONCRETE

A poured concrete pool deck provides a smooth yet slip-resistant surface. It can be customized to suit any style preference. Concrete pool decks are low-maintenance and cost-effective. They are durable against extreme weather conditions such as heat, cold, and moisture without cracking or fading. Exposed aggregate is a popular finish achieved by adding colored stones, beads, seashells, or sea glass to the mix.

NATURAL STONE

A natural stone pool patio is a luxurious and elegant addition to any outdoor space. Made from natural stone such as travertine, bluestone, limestone, or slate, these patios provide timeless beauty and sophistication. The unique textures and colors of natural stone blend seamlessly with the surrounding landscape. Natural stone pool patios are highly durable, slip-resistant and inherently remain cool underfoot on hot summer days.

MANUFACTURED STONE PAVERS

Made from high-quality materials such as concrete or natural stone, pavers can withstand heavy foot traffic and harsh weather conditions. Their interlocking design provides stability by preventing shifting and uneven settling. Manufactured pavers come in a wide range of styles, allowing endless design possibilities. Additionally, their non-slip surface provides a safe and comfortable walking surface, reducing the risk of accidents around the pool.

RETAINING WALLS

Retaining walls are structures designed to hold back soil or other materials and prevent erosion or collapse. They are commonly used in landscaping and construction projects to create level surfaces, prevent landslides, or create usable space on sloping terrain. They can be designed to blend in with the surrounding landscape or create a focal point in a garden or outdoor space.

NATURAL STONE RETAINING WALLS

Natural material retaining walls are structures made from organic materials found in nature such as rocks, boulders, logs, or timber. Rocks and boulders are commonly used in retaining walls for their inherent ability to withstand pressure from the soil. They can be stacked or mortared together to create a sturdy, attractive and usable design element.

One of the advantages of natural material retaining walls is their ability to blend in with natural surroundings. They can be used to create terraced gardens, define pathways, or provide seating areas.
